

NetMatrix

Automatic Event-Driven Push Live Video
Intelligent Video Stream Delivery – Anywhere!

True Event Detection and Event-Driven Push Live Video NetMatrix, OnSSI's add-on software module for its NetDVR and NetDVMS software suites, transforms your surveillance system into a true intelligent alarm and alert system.

The combination of powerful event detection algorithms and Push Live Video creates a sophisticated video distribution tool, extending the functionality and reach of your surveillance system. NetMatrix can display video on alarm on your control room alarm spot-monitor, display video from an alert camera on your PC monitor using a pop-up window on top of all other running applications, and be used to automatically push video to a police cruiser-mounted laptop. All this to enable you to respond faster and more accurately to any event.

Endless Possibilities Using IP-Based Surveillance Numerous cameras can be securely located anywhere within the network, whether wired or wireless. Alerts and live video streams can be pushed to any user's display monitor or quad display (full screen or pop-up) and PDA (optional). Video from any camera can be pushed to any number of users, using only one data stream coming from the camera, saving valuable bandwidth.

The NetMatrix user-interface includes functions such as one-touch switching of multiple cameras to multiple display screens, activation via graphical premises maps, and redirection of predefined video streams to users' monitors, and many more.

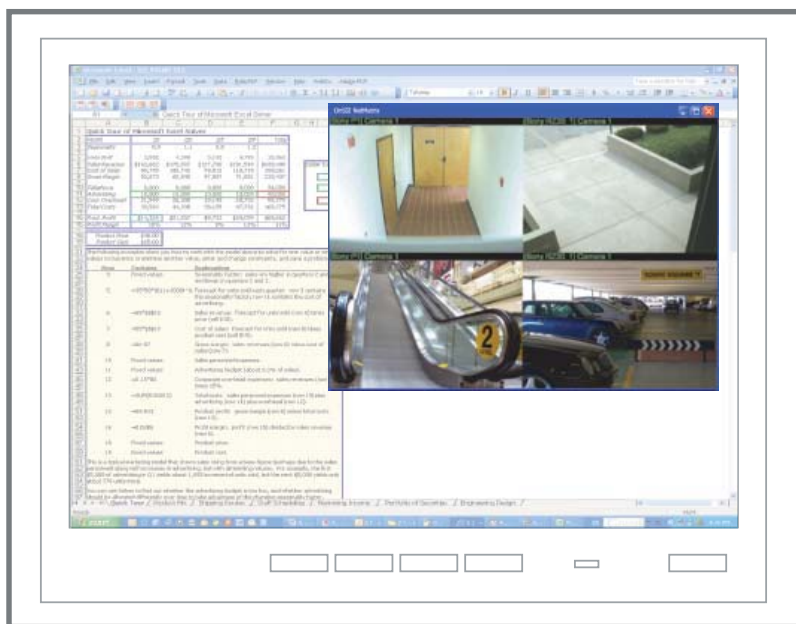

The NetMatrix Advantage

- Intuitive user interface
- High resolution digital quality images
- Valuable tool for both unmanned and manned surveillance systems
- Automatic event-driven push of live video to your desktop or alarm spot monitor
- Event detection based on motion detection, contact closure, and/or 3rd party command via API
- Image display on dedicated monitor or pop-up window
- Live video push to multiple users upon event
- Control over multiple remote monitors
- Easy integration with Access Control systems
- Turn your desktop into an alarm monitor
- Eliminates the need for multiple ports video matrix and coax cabling

Alarm display pop-up in quad format

Taking full advantage of OnSSI's robust network-based video streaming technology, NetMatrix gives you the opportunity to think beyond the boundaries of traditional analog CCTV, and join the next generation of intelligent surveillance systems.

Ordering Information

- NetMatrix-Base
- Video switching control module
- NetMatrix-Viewer
- Intelligent Display Client for NetMatrix (one client license required per client-user machine)
- Software Upgrade Plan (SUP)
- SUP-NetMatrix-Base
- SUP-NetMatrix-Viewer

Minimum Hardware Requirements

- NetMatrix-Base
- Add on to NetDVR/NetDVMS Server
- NetMatrix-Viewer
- XP Pro, P4, 3.0GHz, 512 MBRAM, 64MB Graphic module with AGP/PCIe support.

Related Products from OnSSI
